let s face it teaching secondary math can be hard so much about how we teach math today may look and feel different from how we learned it teaching math in a student centered way changes the role of the teacher from one who traditionally delivers knowledge to one who

fosters thinking most importantly we must ensure our practice gives each and every student the opportunity to learn grow and achieve at high levels while providing opportunities to develop their agency and authority in the classroom which results in a positive math identity whether you are a brand new teacher or a veteran if you find teaching math to be quite the challenge this is the guide you want by your side designed for just in time learning and support this practical resource gives you brief actionable answers to your most pressing questions about teaching secondary math written by four experienced math educators representing diverse experiences these authors offer the practical advice they wish they received years ago from lessons they ve learned over decades of practice research coaching and through collaborating with teams teachers and colleagues especially new teachers every day questions and answers are organized into five areas of effort that will help you most thrive in your secondary math classroom how do i build a positive math community how do i structure organize and manage my math class how do i engage my students in math how do i help my students talk about math how do i know what my students know and move them forward woven throughout you ll find helpful sidebar notes on fostering identity and agency access and equity teaching in different settings and invaluable resources for deeper learning the final question where do i go from here offers guidance for growing your practice over time strive to become the best math educator you can be your students are counting on it what will be your first step on the journey

part ii of the selected works of ivan georgievich petrowsky contains his major papers on second order partial differential equations systems of ordinary differential equations the theory of probability the theory of functions and the calculus of variations many of the articles contained in this book have profoundly influenced the development of modern mathematics of exceptional value is the article on the equation of diffusion with growing quantity of the substance this work has found extensive application in biology genetics economics and other branches of natural science also of great importance is petrowsky s work on a problem which still remains unsolved that of the number of limit cycles for ordinary differential equations with rational right hand sides

a large number of physical phenomena are modeled by nonlinear partial differential equations subject to appropriate initial boundary conditions these equations in general do not admit exact solution the present monograph gives constructive mathematical techniques which bring out large time behavior of solutions of these model equations these approaches in conjunction with modern computational methods help solve physical problems in a satisfactory manner the asymptotic methods dealt with here include self similarity balancing argument and matched asymptotic expansions the physical models discussed in some detail here relate to porous media equation heat equation with absorption generalized fisher s equation burgers equation and its generalizations a chapter

each is devoted to nonlinear diffusion and fluid mechanics the present book will be found useful by applied mathematicians physicists engineers and biologists and would considerably help understand diverse natural phenomena
